

# the computer system

## CHARTS

A management control and planning system for container and ro-ro terminals, providing information relating to location, status and availability of cargo.

## SPARCS

An advanced Ship & Yard Planning System.

## FCPS

The community system which processes customs entries and provides inventory control for all imports, exports, transshipments and hazardous cargoes.

## WIS

Warehouse Information System for Forest Products with EDI links to Customers.

## Internet/EDI Gateway

Provides world wide access to the community and Port Systems.

## RTM

A real time graphical management system which constantly monitors cargo operations and updates system parameters to meet demands.

## TSS

An advanced Tug (internal movement vehicle) scheduling system which optimises resources with work load.

## RTO

A real time operational system, which despatches work to cargo handling equipment using radio data transmission and records the physical location of containers placed in the park

## MARINE

A real time management marine information system which automatically updates FCPS with vessel arrival and departure information.
